PROFESSIONAL SUMMARY

Final-year Engineering student in **Automatic Control & Applied Computer Science (AIA)** at UTCB and **Software Engineer Intern — Automation & Integrations at DeviDevs**. Proven background in Python backend automations, cloud API integrations (Google Drive, Gmail, Sheets), Unix IPC daemons, and autonomous AI systems. Experienced in 2D gameplay architecture and modular C# subsystems (Unity) with 87+ tracked engineering hours under Git Flow and Jira Agile workflows.

WORK EXPERIENCE

- Software Engineer Intern — Automation & Integrations · DeviDevs Technologies**

Jul 2026 – Prezent

 - Second Brain & Knowledge Vault Architecture:** Architected and deployed an autonomous Obsidian Knowledge Vault based on the Three-Spaces cognitive model (Identity, Graph Notes, Operations) with automated schema validation.
 - Human-in-the-Loop Multi-Agent Bridge:** Engineered interactive daemon bridges connecting AI coding harnesses with Telegram/Apple Watch push notifications, dynamic action streaming, and a FIFO task execution queue.
 - Automation Pipelines & Concurrency:** Developed automated Python ETL pipelines (Google Drive XLSX trackers, Gmail, Sheets) with scheduled macOS launchd daemons and OS-level atomic file locking (`fcntl.flock`).
 - Browser Automation & Chrome CDP:** Built automated Playwright CDP controllers to orchestrate browser workflows and rich-text document interactions.
- Operations & Customer Support · Tucano Coffee**

Jun 2022 – Oct 2022

 - Managed high-volume order pipelines, inventory reconciliation, and active team communication in a fast-paced environment.

FEATURED PROJECTS

- 2D Tactical Combat & AI Game · Academic Practice Project (DeviDevs / UTCB)**

GitHub ↗

 - Engineered full combat mechanics: autonomous FSM Enemy AI, dynamic orbit cover from `Collider2D.bounds`, object pooling, and local co-op.
 - Collaborated in a distributed team delivering 10+ Jira epics (~87.4 tracked hours) under enterprise Git Flow (feature branching, PR code reviews, rebasing).
- Autonomous AI Agent Bridge & Second Brain · Python / Unix**
 - Architected an interactive Human-in-the-Loop bridge with atomic `flock` concurrency, FIFO task queues, and watchOS/iOS push triggers.

EDUCATION

- B.Sc. in Automatic Control & Applied Computer Science**

Technical Univ. of Civil Engineering Bucharest

2023 – 2027 (Final Year / Licență)

 - Control Theory, Robotics, Discrete Math, Electronics
- Specialized International Courses**

Catholic University of Valencia (2024)

 - Neuroscience & Artificial Intelligence
- University of Zadar (2024)**
 - Film Literacy & Visual Storytelling

SKILLS & STACK

- Languages**
